

IA Concerns + Strategy

I proposed an updated IA structure to the Mobile team, as the current solution doesn’t scale for multiple transactions.

1 Agreement for MVP (MO)

In the navigation, ‘Home’ and ‘Search’ would exist within the transaction context. I have yet to find an app that uses segmented contexts like this.

2 Working with multiple agents. (IA)

For clients working with multiple agents or buying and selling multiple properties simultaneously, the Client Home must account for these scenarios.

3 Transaction switcher

The agent-branded transaction switcher was a huge success in testing with our Compass agents. It allows clients to seamlessly switch between transactions while keeping data secure.
