

Overview

I shaped the Buy-Side team’s vision for the Client Home dashboard and took sole ownership of the design. Our team was the first to deliver, and I collaborated closely with my immediate team (Product and Engineering) as well as cross-functional stakeholders to create a scalable design that met our goals and objectives.

As part of the delivery, I also redesigned the listing cards and proposed an improved solution to the Mobile Team to address information architecture (IA) concerns in multi-transaction scenarios

- Goal
-
1. Create a more efficient collaboration between client - agents

2. Increase engagement of collaborative features by 5%

3. Increase communication between clients and agents in the app.
